

Riley Morris

(647) 469-0777 • riley.morris@alumni.utoronto.ca • linkedin.com/in/riley1morris • riley-collab.github.io/personal

TECHNICAL SKILLS

Frontend Technologies: HTML, JavaScript, TypeScript, ReactJS, Tailwind CSS, Material-UI, Redux Toolkit, Jotai, React Query, Shadcn

Backend Technologies: Python, Node.js, NestJS, FastAPI, Prisma, Supabase, Elasticsearch, REST

Cloud, Infrastructure + Testing: AWS, Terraform, Jest, Playwright

AI & Developer Tooling: GitHub Copilot (agent mode & coding agent), Claude, Cursor, MCP, Agentic Workflows

PROFESSIONAL EXPERIENCE

Software Engineer | *Avanade (Microsoft Fabric UX)* May 2025 - Present

- Shipped 5 new React features to the Microsoft Fabric UX project, reaching 19,000+ users, and resolved complex defects
- Drove features end to end with designers, PMs and external dev teams, managing dependencies across 6 teams
- Built an AI agent with GitHub Copilot coding agent to autonomously resolve low-effort incidents
- Embedded GitHub Copilot into developer and non-developer workflows, automating 3 weekly tests and saving ~4 hours of work per week
- Owned on-call duties across feature switch deployments, incident triage and production error log monitoring

Software Engineer | *Flock - Contract* Jan 2025 - Apr 2025

- Developed a referral management platform using React, Tailwind, and ShadCN, with a customizable and embeddable referral component
- Built and secured scalable backend APIs with NestJS and Supabase, enabling real-time analytics, third-party integrations and automated reward payouts, tested with Jest and Playwright

Software Engineer | *Sanofi* Oct 2022 - Dec 2024

- Designed and built a GenAI application to generate Clinical Study Reports (CSR), expediting drug-to-market timelines by 90%, built with React and NodeJS
- Led a refactor of front-end codebases onto an in-house component library, reducing development time by 20% and improving maintainability
- Developed a full stack feature (React, Python, FastAPI) enabling data scientists and ML engineers to rapidly develop and deploy AI models and applications at scale
- Built an internal search application for 10,000+ employees across structured and unstructured data, and improved search recall by 15% with an Elasticsearch DisMax query without relevancy loss

Software Engineer Intern | *Nference* Jan 2022 - Apr 2022

- Built a React search interface integrating NLP to identify medications in biomedical papers, and a trie-based data structure giving sub-millisecond queries over 1 million+ entries

Market Analyst Intern | *TMX Group - Equity and Derivatives Trading Products* May 2021 - Aug 2021

- Developed data-driven insights to optimize client interactions and support growth of Equity Trading products

Research Analyst Intern | *Virtu Financial* May 2019 - May 2020

- Analyzed trading data for 90 institutional clients to identify execution trends, producing algorithmic performance reports for the Global Transaction Cost Analysis team

EDUCATION

Bachelor of Applied Science, University of Toronto June 2022

Electrical & Computer Engineering, Minor in Business, Leadership & Communications Certificates

SOFTWARE ENGINEERING PROJECTS

Relationship Management Library: vanillaJS library for modelling and viewing relationships between nodes, visualized with the Canvas API

Web-Based Navigation UI and Algorithm: Google Maps competitor with a responsive UI and performance-driven routing algorithms (Dijkstra)
